

Broadband over Power Line (BPL) will result in unacceptable interference to AM reception for the amateur and commercial bands. Many people will no longer be able to enjoy listening to music, news, etc., for free from local or distant cities or from other countries. High speed Internet access is desirable for everyone, but not at the expense of interference to our AM frequencies. The power companies do a terrible job of maintaining noise free lines now, once they are allowed to generate noise an era will end.

Perhaps you can allot them (BPL) some of the frequencies that the analog TV stations will be moving off of. Give them TV channel 6 for broadband use.
